

Lamifol

Lamifol is the old name for foil tape and metal blanks packed in plastic boxes.

The suffixes -fol and F stand for foil, a term which covers sheet thicknesses from 0.01 mm to 1.0 mm. With the introduction of M-Tech[®]F, these products are now supplied in handy and environmentally-friendly cardboard packaging.

The idea of the pre-defined Lamifol workshop range has been changed in favour of metal dispensers (so-called **CombiStores**) which can be stocked according to the customer's preference.

Other improvements: it is easier to remove the tapes and the packaging provides greater safety at the workplace, as the use of cardboard avoids the danger of having breakable plastic boxes.

M-Tech[®]F products have an EAN 13 barcode to facilitate storage and merchandise management.
